

What is Claimed is:

1. A data recording system, comprising:

a plurality of recording devices for recording data containing images and/or voice in a prescribed recording medium; and

a recording objective determination device comprising at least recording objective determination means of determining by a predetermined method, recording device for recording the data among said plurality of recording devices.

2. A recording objective determination device, comprising at least:

recording objective determination means of determining by a predetermined method, a recording device for recording data among a plurality of recording devices each which records data containing images and/or voice in a recording medium,

wherein when the data is recorded, the data is recorded in the recording medium of said recording device determined by said recording objective determination means.

3. The recording objective determination device according to claim 2, wherein said predetermined method is to select any of said plurality of recording devices predetermined by a user.

4. The recording objective determination device according to claim 3, wherein

at least one of said plurality of recording devices is a recording device using a removable recording medium of recording the data in a removable recording medium mounted on the device; and

said recording device selected in advance by the user is said recording device using a removable recording medium.

5. The recording objective determination device according to claim 2, wherein

said user can select a mode in which said user can optionally select a recording device for recording the data; and

said recording objective determination device further comprising selection receipt means of accepting a selection of the user as to which mode is to be selected, a mode in which said recording objective determination means selects a recording device and a mode in which the user optionally selects a recording device.

6. The recording objective determination device according to claim 5, further comprising use frequency check means of checking a use frequency of each of said plurality of recording devices in the past,

wherein when said selection receipt means accepts the user selection of the mode in which said recording objective determination means determines a recording device, said recording objective determination means selects a recording device having a highest use frequency checked by said use frequency check means as a predetermined method.

7. The recording objective determination device according to claim 2, wherein

at least one of said plurality of recording devices is a recording device using a removable recording medium of

recording the data in a removable recording medium mounted on the device; and

 said predetermined method refers to a method of selecting said recording device using a removable recording medium when said removable recording medium is mounted on said recording device using a removable recording medium.

8. The recording objective determination device according to any one of claims 2 to 7, wherein

 when a remaining recording capacity of said recording medium in said recording device for recording objective determined by said recording objective determination means is equal to or smaller than a predetermined capacity, or when it is prohibited that data is newly recorded in said recording medium, said recording medium of said selected recording device for recording data does not record the data.

9. The recording objective determination device according to any one of claims 2 to 6,

 wherein at least one of said plurality of recording devices is a recording device using a removable recording medium of recording the data in a removable recording medium mounted on the device, and at least another recording device of said plurality of recording devices is a recording device using a fixed type recording medium recording the data in a fixed type recording medium; and

 said recording objective determination device further comprising control means of controlling the data such that when said recording device for recording data, determined by said recording objective determination means is said

recording device using a removable recording medium, and (1) no recording medium is mounted on said recording device using a removable recording medium, or (2) a remaining recording capacity of the mounted removable recording medium is equal to or smaller than a predetermined capacity, or (3) it is prohibited that data is newly recorded in said mounted removable recording medium,

the data can be recorded in the fixed type recording medium of said recording device using a fixed type recording medium, and (1) after the removable recording medium is mounted on said recording device using a removable recording medium, or (2) after the removable recording medium having a predetermined amount of remaining recording capacity is mounted on said recording device using a removable recording medium, or (3) after the removable recording medium permitted to record new data is mounted on said recording device using a removable recording medium.

10. A program for causing a computer to serve as all or a part of:

said recording objective determination means of determining by a predetermined method, a recording device for recording data among a plurality of recording devices each which records data containing images and/or voice in a recording medium; in a recording objective determination device of Claim 2.
